During the fire, the product may produce harmful gases of carbon oxides and other hazardous, unidentified products of thermal decomposition. Do not inhale combustion products, they can be dangerous for human health.

#### 5.3 Advice for firefighters

Personal protection typical in case of fire. Do not stay in the fire zone without self-contained breathing apparatus and protective clothing resistant to chemicals. In case of fire cool endangered containers with water fog from safe distance. In case of fire, cool endangered containers with water spray from a safe distance. Collect the used extinguishing media.

### Section 6: Accidental release measures

#### 6.1 Personal precautions, protective equipment and emergency procedures

Limit the access for the outsiders into the breakdown area, until the suitable cleaning operations are completed. In case of a large release, isolate the exposed area. Ensure that only the trained personnel removes the effects of the accident. Ensure adequate ventilation. Avoid contact with eyes and skin. Use personal protective equipment. Immediately wipe spilled product – may produce extremely slippery surfaces.

#### 6.2 Environmental precautions

In case of release of large amounts of the product, it is necessary to take appropriate steps to prevent it from spreading into the environment. Notify relevant emergency services.

#### 6.3 Methods and material for containment and cleaning up

Collect product using liquid binding materials (e.g. sand, earth, universal binding substances, silica etc.) and place it in correctly labelled containers. Treat collected material as waste. Flush product residues with water. Clean and ventilate contaminated place.

#### 6.4 Reference to other sections

Appropriate conduct with waste product – see section 13. Personal protective equipment – see section 8.

##### Hand protection

In case of frequent or prolonged contact with the product recommended the protective gloves. Material for gloves select individually at the workplace. In case of a short exposure, use protective gloves with 2nd or higher level of effectiveness (breakthrough time > 30 min). In case of a long exposure, use protective gloves with 6th level of effectiveness (breakthrough time > 480 min).

When using protective gloves during work with chemical products, it should be noted that the efficacy levels and corresponding breakthrough times do not indicate actual times of protection at a particular workplace, because the protection can be affected by many factors, e.g. temperature, other substances etc. If there are any signs of degradation, damage or change in appearance (colour, flexibility, shape), it is recommended to replace the gloves with a new pair. Please follow the manufacturer's instructions, not only in terms of gloves' usage, but also in terms of their cleaning, maintenance and storage. It is also important to know how to take off the gloves in order to avoid hands contamination.

Use tightly protective glasses if there is a risk of eye contamination.

##### Respiratory protection

Respiratory protection is not required when product is used as intended.

Personal protective equipment must meet requirements of Regulation 2016/425/EU. Employer is obliged to ensure equipment adequate to activities carried out, with quality demands, cleaning and maintenance.

##### Environmental exposure controls

Do not allow large quantities of the product to contaminate ground water, drains, sewages or soil. Emissions from ventilation or work process equipment should be checked to ensure they comply with the requirements of environmental protection legislation.
